GENIUS
## CLASS

THE LEADING SIS
FOR ONLINE LEARNING

Virtual and Blended schools throughout the world depend on the Genius Class SIS student information system to facilitate customized, effective, and professional school operations. Genius Class integrates with over twenty-five commercial and proprietary Learning Management Systems (LMSs), more than eight payment gateways, and delivers a comprehensive feature set that is powerful but designed to be incredibly easy to use.

"Genius is attentive to detail, produces quick results, goes above and beyond to please their clients and takes pride in the work they do."

"Genius has been excellent to work with to meet our unique needs. The tool itself empowers users and has created efficiencies. I see only good things ahead."

"I have been impressed with the commitment shown by Genius to get us operational and in helping to build a solution that we need going forward."

"You have no idea how much we all appreciate the service and commitment. Compared to what I am used to…this is heaven."

FEATURES

ADMISSIONS
Students create their own account and submit an application to the school, which goes through a customizable acceptance process until it is accepted.

STUDENT PORTAL
Students can request courses, track their academic progress, view calendar events and make payments using their portal.

ENROLLMENT MANAGEMENT
School staff can track the progress of students enrolled in courses and send emails to students matching some criteria using existing templates or creating new ones.

ROLLING ENROLLMENTS AND DYNAMIC PACING
Rolling enrollments are fully supported, so students may have different start dates for their enrollments. Pacing may be defined based on the enrollment length to track student progress.

STAFF MANAGEMENT
Genius Class SIS also tracks teacher information, including personal information, utilization levels (to ensure appropriate enrollment numbers), certifications and performance.

ASSET TRACKING
Materials can be assigned to sections, so that upon enrollment the asset is automatically reserved and shows up in a shipping report.

REGISTRATION
Students select the courses they would like to be enrolled in, and the school staff (or the local school) approves these requests, which turn into enrollments.

ELEGANT AND INTUITIVE INTERFACE
Through the use of dashboards and user-friendly screens, Genius Class SIS offers comprehensive access to information and an easy data visualization interface.

REPORTING
There are more than 30 existing reports, including completion reports, and users can create and save new reports using a powerful report builder. Data can be exported to Microsoft® Excel® format.

STUDENT MANAGEMENT
Genius Class SIS tracks student information such as personal information, transcript history, communication history, course requests and general ledger.

INTEGRATION WITH EXTERNAL SYSTEMS
Genius Class SIS can be integrated with Learning Management Systems (LMSs) and offers an extensive API that lets external applications access and manipulate the data stored by Genius Class SIS.

BRANDING AND ACCESS
Genius Class SIS can be used by multiple schools or programs under a main entity. Each sub-division may have its own branding and will only have access to their data and their students.

ACCOUNTING
Genius Class SIS interfaces with external payment services such as Google® Checkout® and PayPal® so that students can make online payments, and different amounts can be charged to different student groups.

ADMINISTRATION
The system administration can easily setup new users, configure their access, track logs, edit school parameters, edit dynamic lists and much more.
